ACCESSIBILITY CONFORMANCE REPORT

Silverchain referrer portal

Evidence of accessibility compliance for the Max Healthcare Equipment referrer portal proposed for Silverchain, assessed against the Web Content Accessibility Guidelines (WCAG) 2.1 at Level AA.

43 of 50
WCAG 2.1 A and AA criteria supported. The other 7 do not apply (no audio, video or motion).

0
Automated failures across 20 screens and dialogs, desktop and mobile

25 of 25
Keyboard, focus, reflow and text spacing checks passed

35
Distinct WCAG test rules run and passed

Summary

Product	Max Healthcare Equipment referrer portal for Silverchain: access page and portal (catalogue, quotes, orders, proof of delivery, trials, hire to buy, invoices and statements)
Standard	WCAG 2.1, Level AA
Conformance	Supports WCAG 2.1 Level AA for the scope below
Report date	27 October 2026
Version tested	Demonstration build of the portal
Browsers and devices	Chromium (Chrome and Edge engine) at desktop 1280 x 900 and mobile 390 x 844, plus reflow at 320 and 640 CSS pixels
Contact	Max Healthcare Equipment, 1800 684 277, info@maxhealthcare.com.au

How it was tested

- **Automated testing** with axe-core 4.10.2 (Deque Systems), the engine behind Google Lighthouse and Microsoft Accessibility Insights. Rule sets: wcag2a, wcag2aa, wcag21a, wcag21aa. Run on every portal tab and on each dialog: order detail, proof of delivery, quote document and statement.
- **Scripted manual checks** covering keyboard-only operation, focus visibility and order, dialog focus management, error handling, reflow at 320px and WCAG text spacing overrides. Every check was repeated after each fix.
- **Colour contrast** measured with the WCAG relative luminance formula for text, status chips, focus rings and form field borders.
- **Criterion-by-criterion review** of all 50 WCAG 2.1 Level A and AA success criteria, recorded below.

> Issues found during testing were fixed before this report was issued: green status chip contrast (4.41:1 raised to 5.55:1), form field border contrast (1.5:1 raised to 3.54:1), keyboard access to scrollable tables, focus returning to the control that opened a dialog, and keyboard access to individual orders.

Automated results by screen

Screen or dialog	Viewport	Rules passed	Failures
Access page	Desktop 1280 x 900	20	0
Catalogue	Desktop 1280 x 900	28	0
New quote and New order	Desktop 1280 x 900	29	0
Quotes	Desktop 1280 x 900	27	0
Quote document (PDF view)	Desktop 1280 x 900	29	0
Orders	Desktop 1280 x 900	29	0
Order detail with proof of delivery	Desktop 1280 x 900	32	0
Order arriving from supplier	Desktop 1280 x 900	30	0
Trials	Desktop 1280 x 900	31	0
Hire to buy	Desktop 1280 x 900	30	0
Invoices	Desktop 1280 x 900	27	0
Account statement	Desktop 1280 x 900	28	0

Screen or dialog	Viewport	Rules passed	Failures
Access page	Mobile 390 x 844	20	0
Catalogue	Mobile 390 x 844	29	0
New quote and New order	Mobile 390 x 844	30	0
Quotes	Mobile 390 x 844	27	0
Orders	Mobile 390 x 844	30	0
Trials	Mobile 390 x 844	32	0
Hire to buy	Mobile 390 x 844	31	0
Invoices	Mobile 390 x 844	28	0

Rules run and passed: aria-allowed-attr, aria-conditional-attr, aria-deprecated-role, aria-hidden-body, aria-hidden-focus, aria-prohibited-attr, aria-required-attr, aria-required-children, aria-required-parent, aria-roles, aria-valid-attr, aria-valid-attr-value, autocomplete-valid, avoid-inline-spacing, button-name, bypass, color-contrast, document-title, duplicate-id-aria, form-field-multiple-labels, html-has-lang, html-lang-valid, image-alt, label, link-in-text-block, link-name, list, listitem, meta-viewport, nested-interactive, scrollable-region-focusable, select-name, svg-img-alt, td-headers-attr, th-has-data-cells.

Keyboard, focus and layout checks

Check	Result
First Tab lands on the skip link	Pass
Skip link has a visible focus ring	Pass
Skip link moves focus to the portal content	Pass
Visible focus indicator on the first 60 Tab stops	Pass
Focus stays on the Orders tab after it opens	Pass
Order opens from the keyboard	Pass
Focus moves into the dialog	Pass
Dialog has an accessible name	Pass

Check	Result
Tab stays inside the open dialog	Pass
Escape closes the dialog and returns focus to the order	Pass
Missing required field gets focus and is marked invalid	Pass
Error message is in a status live region	Pass
Reflow at 320px, catalogue: no sideways page scroll	Pass
Reflow at 320px, quote: no sideways page scroll	Pass
Reflow at 320px, orders: no sideways page scroll	Pass
Reflow at 320px, trial: no sideways page scroll	Pass
Reflow at 320px, invoices: no sideways page scroll	Pass
Reflow at 640px, catalogue: no sideways page scroll	Pass
Reflow at 640px, quote: no sideways page scroll	Pass
Reflow at 640px, orders: no sideways page scroll	Pass
Reflow at 640px, trial: no sideways page scroll	Pass
Reflow at 640px, invoices: no sideways page scroll	Pass
Text spacing override, catalogue: no clipped text	Pass
Text spacing override, orders: no clipped text	Pass
Text spacing override, trial: no clipped text	Pass

WCAG 2.1 Level A and AA criteria

Criterion	Name	Level	Status	How the portal meets it
1.1.1	**Non-text content**	A	Supports	Logos and photos have text alternatives. Product thumbnails sit beside the product name and are marked decorative. Delivery signatures are exposed as images named "Signature of …". Delivery photos carry captions.
1.2.1	**Audio-only and video-only (prerecorded)**	A	Not applicable	The portal has no audio or video.
1.2.2	**Captions (prerecorded)**	A	Not applicable	No video.
1.2.3	**Audio description or media alternative**	A	Not applicable	No video.
1.2.4	**Captions (live)**	AA	Not applicable	No live media.
1.2.5	**Audio description (prerecorded)**	AA	Not applicable	No video.
1.3.1	**Info and relationships**	A	Supports	Real headings, data tables with header cells, form fields grouped in fieldsets with legends, and every field has a programmatic label.
1.3.2	**Meaningful sequence**	A	Supports	Reading order in the code matches the visual order at every screen size.
1.3.3	**Sensory characteristics**	A	Supports	Instructions never rely on shape, colour, size or position alone.
1.3.4	**Orientation**	AA	Supports	Works in portrait and landscape. Nothing is locked to one orientation.

Criterion	Name	Level	Status	How the portal meets it
1.3.5	**Identify input purpose**	AA	Supports	Fields about the signed-in user (contact name, email) carry autocomplete tokens. Client fields deliberately do not, as they describe another person.
1.4.1	**Use of colour**	A	Supports	Every status colour is paired with a text label, for example "On trial, decision required" and "Arriving from supplier".
1.4.2	**Audio control**	A	Not applicable	No audio.
1.4.3	**Contrast (minimum)**	AA	Supports	All text meets 4.5:1 (large text 3:1). Automated contrast checks pass on every view. Status chip colours were darkened during testing to clear the threshold (green chip now 5.55:1).
1.4.4	**Resize text**	AA	Supports	Text resizes to 200% without loss of content or function. Layout reflows rather than clipping.
1.4.5	**Images of text**	AA	Supports	No images of text other than the Max and Silverchain logos, which are exempt.
1.4.10	**Reflow**	AA	Supports	No sideways page scrolling at 320 CSS pixels (equivalent to 400% zoom). Wide data tables scroll inside a keyboard-focusable region, which WCAG permits for two-dimensional content.
1.4.11	**Non-text contrast**	AA	Supports	Form field borders are 3.54:1 against white and focus rings are 5.89:1. Selected states use a 2px red outline and a tinted background.

Criterion	Name	Level	Status	How the portal meets it
1.4.12	**Text spacing**	AA	Supports	Tested with WCAG text spacing overrides (line height 1.5, letter spacing 0.12em, word spacing 0.16em, paragraph spacing 2em). No text is clipped or overlaps.
1.4.13	**Content on hover or focus**	AA	Supports	The portal shows no custom hover or focus pop-ups.
2.1.1	**Keyboard**	A	Supports	Every action can be done from the keyboard: tabs, catalogue, quote builder, order detail, proof of delivery photos, trial decisions, payments and the quote PDF.
2.1.2	**No keyboard trap**	A	Supports	Dialogs keep focus inside while open, as intended, and always close with Escape or the Close button.
2.1.4	**Character key shortcuts**	A	Supports	No single-key shortcuts.
2.2.1	**Timing adjustable**	A	Supports	No time limits. Confirmation messages are also reflected in the page itself, for example a new order appearing in Orders.
2.2.2	**Pause, stop, hide**	A	Supports	Nothing moves, blinks or auto-updates.
2.3.1	**Three flashes or below threshold**	A	Supports	No flashing content.
2.4.1	**Bypass blocks**	A	Supports	"Skip to portal content" link as the first focusable element, plus header and main landmarks.
2.4.2	**Page titled**	A	Supports	Each page has a descriptive title.

Criterion	Name	Level	Status	How the portal meets it
2.4.3	**Focus order**	A	Supports	Focus follows a logical order. After a tab or filter updates the screen, focus stays on the control used. Opening a dialog moves focus into it, and closing it returns focus to the control that opened it.
2.4.4	**Link purpose (in context)**	A	Supports	Every button and link has a clear name. Repeated buttons name their target, for example "Hire Toilet seat raiser" and "Open order 70540 for Patricia Moore".
2.4.5	**Multiple ways**	AA	Supports	Every area is reachable from the tab bar, and the catalogue, quote builder and orders all have search.
2.4.6	**Headings and labels**	AA	Supports	Headings and field labels describe their content, for example "Client PID" and "Preferred date".
2.4.7	**Focus visible**	AA	Supports	A 3px focus ring on every focusable element, white on the navy header. Verified on the first 60 tab stops.
2.5.1	**Pointer gestures**	A	Supports	No multi-point or path-based gestures.
2.5.2	**Pointer cancellation**	A	Supports	Actions fire on release (standard click), never on press.
2.5.3	**Label in name**	A	Supports	Where a button has an extended accessible name, it begins with or contains the visible text.
2.5.4	**Motion actuation**	A	Not applicable	No motion-triggered features.
3.1.1	**Language of page**	A	Supports	Page language set to Australian English (en-AU).
3.1.2	**Language of parts**	AA	Supports	All content is in English.

Criterion	Name	Level	Status	How the portal meets it
3.2.1	**On focus**	A	Supports	Focusing a control never changes context.
3.2.2	**On input**	A	Supports	Changing a filter or the trial location updates content in place without moving the user elsewhere.
3.2.3	**Consistent navigation**	AA	Supports	Header, New quote and New order buttons and tab bar are in the same place on every screen.
3.2.4	**Consistent identification**	AA	Supports	The same functions use the same names throughout, for example "Client PID".
3.3.1	**Error identification**	A	Supports	Missing required fields are named in a status message, marked invalid (aria-invalid) and the first one receives focus.
3.3.2	**Labels or instructions**	A	Supports	Every field has a visible label. Required fields are marked with an asterisk, explained above the form, and announced as required.
3.3.3	**Error suggestion**	AA	Supports	Messages say exactly what to add, for example "Add the client name, PID and delivery address."
3.3.4	**Error prevention (legal, financial, data)**	AA	Supports	Approving a quote, buying hired equipment, booking a trial return and paying an invoice all need a separate confirmation. Quotes can be edited until they are approved.
4.1.1	**Parsing**	A	Supports	Valid, well-formed markup with no duplicate IDs. (This criterion is always satisfied under WCAG 2.1 errata.)

Criterion	Name	Level	Status	How the portal meets it
4.1.2	**Name, role, value**	A	Supports	Custom controls expose their role and state: tabs (aria-selected), colour swatches (aria-pressed), dialogs (aria-modal with a name) and scrollable tables (named regions).
4.1.3	**Status messages**	AA	Supports	Confirmations and errors are announced through a polite live region (role="status") without moving focus.

Built-in accessibility features

- Skip link, landmarks and a logical heading structure on every screen.
- Full keyboard operation, with a visible focus ring and focus kept in place as content updates.
- Dialogs that take focus, keep it while open, close with Escape and return focus afterwards.
- Plain English status labels, never colour alone, for example "Arriving from supplier" instead of "Backorder".
- Required fields marked and announced, with clear error messages and focus moved to the field that needs attention.
- Responsive layout that reflows to a 320px wide screen, so it works on a phone and at 400% zoom.
- Large touch targets: buttons are at least 44px high.

Ongoing commitment

- Every release is re-tested with the same automated and keyboard checks before it reaches Silverchain users.
- Before go-live Max will complete assistive technology testing with NVDA on Windows and VoiceOver on iOS, and will share the results with Silverchain.
- Accessibility feedback or problems can be reported to Max on 1800 684 277 or info@maxhealthcare.com.au and will be acknowledged within two business days.
